

Time	~ 2 - 3 hours
Learning Goals	<ul style="list-style-type: none">• Integrate the Paypal Braintree payment system into the PairBnb app.

In the previous exercise, we have walked through with you on how to integrate a payment system in the app. It's now your turn to work out how to include the payment system into our PairBnB.

Objectives

Integrate Braintree into your PairBnB app. You may want to put the form on a different page instead of `braintree/new.html.erb`. Think about allowing for different payment methods. What about putting the JavaScript code in an asset file instead of inside the HTML file? What are the pros and cons of both approaches?

Point to Discuss

1. Why did we use a Sandbox account?
2. How can one setup a real Braintree account instead of Sandbox? ([Hint](#))

Once you can make payment to the Sandbox, congrats! **You're done with this assignment.** You can proceed to commit the changes, raise pull request and merge back to master branch.
