

Time	~ 30 minutes
Learning Goals	<ul style="list-style-type: none"> • Linking stylesheets and script files. • Using the JavaScript console for debugging.

Debugging in Javascript

For Ruby, we can debug by printing out variables using `p` or `.inspect`, or we can pause the code execution using gems like `byebug`.

In Javascript, we can also [debug](#) any issues in javascript by utilising the `debugger` method or running `console.log()`. Open your developr tool by right clicking `inspect element` and switching to the JavaScript console. You should get something like the following (except the words in the console, of course):

You can call `debugger` and `console.log()` in the following ways:

```
$('#box').on('click', '#box', function(){
```

```
    debugger
```

```
})
```

```
$(document).on('click', '#box', function(){
```

```
    console.log($(this));
```

})

Try out both ways and observe the differences between the two.
