

Quora Clone Part 1: Wireframing

Time	~ 1 - 2 hours
Learning Goals	<ul style="list-style-type: none">• Wireframing and planning• Deeper understanding of the MVC

Plan

Every app starts with planning. Design your app's flow to be as similar to [Quora](#) as possible. For now, answers don't have to be threaded, e.g. a single reply flow would suffice for now. The rest should be similar to Quora: **users**, **questions**, and **answers**. Do not implement **votes** in this version.

Wireframe

Spend some time wireframing the application. Wireframe the following pages:

- A **user** signup and login page
- An index page listing all the **questions** (top stories)
- A page showing a particular **question** including its **answers** (and associated user)
- A **user** profile page (don't worry about profile images or any social media element for now)
- A page showing all a **user's** submissions (e.g. "My Questions")
- A page showing all a **user's** answers (e.g. "My Answers")

Here are some nifty tools that you can use for wireframing:

- [Wireframe.cc](#)
- [Marvel](#)
- [Google Drawings](#)

Note that this will be your version one of the app. Keep it simple for now. Once we have a working version, we'll be able to add on more features.

Models and Controllers

For version one, you should have the following models:

1. **User**
2. **Question**
3. **Answer**

Quora Clone Part 1: Wireframing

Discuss with your partner on how the database schema will look like.

User Stories in Trello

Let's apply what you have learnt in the previous challenge here! Sign up for a Trello account and start creating cards for your user stories. You can also upload a screenshot of your database schema onto Trello for future references!

When you're done, move on to the next challenge.
