

Database Drill: Address Book Schema

How would you create a schema for an Address Book?

Requirements:

1. A contact has a first name, last name, company, phone number, and an email address
2. A group has a name
3. A contact can belong to many groups, and a group has many contacts

Objectives

Design schema

Design a database schema for an address book with the above requirements.

Use [SQL Schema Designer](#) to create your schema. When you are done, show your schema to your mentor-on-duty for approval or further improvement. Save the XML of your schema and copy it into the repo for your future reference.
