

<b>Time</b>	~ 1 hour
-------------	----------

Now that we are done with our PairBnB, let's write code that tests code!

The lecture will cover why test writing is important, the different types of tests that can be done, and the framework that we will be using.

As usual, let's do some reading before the lecture starts so that we have a better idea of what to expect.

1. [Thoughtbot: How We Test Rails Applications](#)

2. [Thoughtbot: The Four-Phase Test](#)

The following documentations consist of concepts and syntax that you will be using for the next few challenges. You might want to bookmark them now for easy reference later. Do also read through the introduction/main page of each site too!

3. [Better Specs](#) (at least read through the introduction/main page)

4. [Relishapp's RSpec Documentation](#) (at least read through the introduction/main page)
