This video introduces you to Rails, the most popular web framework for the Ruby language. It covers key concept/differences of Rails:

- Rails commands for the command line/terminal (rails new, rails generate, etc.)
- routes (root, resources, etc.)
- controllers and its actions/methods
- link_to method in views (Rails way to generate an <a> tag)
- form_for (Rails way to generate a <form> tag)
- Strong parameters (Rails way to combat unwanted input submitted from a <form>)
- and more!
